

include in PHP

Using include in PHP allows us to use various parts of a webpage without writing them again and again

footer.php

```
<style>
  footer {
    background-color: #333;
    color: white;
    text-align: center;
    padding: 10px 0;
    bottom: 0;
    width: 100dvw;
  }
</style>

<footer>
  <p>&copy; 2025 - All rights reserved</p>
  <p>Made with ❤️ with GitHub</p>
</footer>
```

index.php

```
<!DOCTYPE html>
<head>
  <title>Home Page</title>
</head>
<body>
  <?php
    include("components/header.php");
  ?>
  <?php
    include("components/home.php");
  ?>
  <?php
    include("components/footer.php");
  ?>
</body>
</html>
```

Using footer component in index.php, just by using include in PHP
